

LCC — ERRs / LoHub & Partner Grant Tracker

Final Concept — Allocation Management, Transfer Tracking & Treasuries

Submitted to: Technical Team

Submitted by: Mohamed Elnour — Operations Manager, LCC

Date: 30 July 2026 | **Version:** v2.0 (final concept for review)

This document contains: the concept, the confirmed logic, the functional scope, the data model, and the UI mockups at the end (Section 9).

1. Executive Summary

We migrated from a Google Sheets tracker to the new system that manages grant decisions and state allocations. The new system covers the "outgoing allocation" side but does not cover the "incoming financial transfers" received from partners and donors through the exchanges, and there is no "treasury" entity reflecting the balance held at each exchange.

We request the development of a dedicated page, "Allocation Management", adding: a "Received Transfers" tab linked to the grant, three treasuries named after the exchanges (LZM / MDR / CP) reflecting the actual balance held at each exchange, a top KPI bar, and a "State Allocations" section below it with PDF-exportable reports. UI mockups are attached in Section 9.

2. Background & Current Gap

In the new system, each grant decision has a "decision amount" distributed across "state allocations". Example: the emergency decision of \$2,000,000 with allocations to North Kordofan. The gap: there is no tracking of transfers actually received, no treasuries aggregating amounts per exchange, and no reconciliation between received, disbursed and remaining.

This data was previously managed in the Transfers tab with the fields: Payment ID, Intermediary, Donor, Date Sent, Amount, Date Received, Backdonor Grant ID, Status, Distribution ID, Exchange (Via), and Comment.

3. Confirmed Logic

3.1 Decision fixed · Received computed

The decision amount is a fixed grant reference that does not change (e.g. \$2,000,000). "Total Received" is computed automatically from the received transfers entered under the allocation — not from the state allocations. Remaining to Receive = Decision – Received. (This changes the previous logic that was based on state allocations.)

3.2 Treasury = actual balance held at the exchange (In – Out)

Each treasury represents an actual cash balance held at the exchange. When a transfer's status changes to "Received" (with a receipt attached) the amount is credited (In) to its exchange's treasury. When a transfer is requested from the exchange (Approvals tab: select exchange) it is debited (Out). Treasury balance = total In – total Out.

3.3 A request may be received in several tranches

A single request may arrive in one or several tranches. Each tranche carries its own amount, exchange, date received, status and receipt, and tranches of the same request may go to different exchanges. The sum of tranches must equal the total request (the system blocks saving on any difference), and each tranche is credited (In) to its exchange's treasury.

3.4 Managed, creatable lists

Donor, grant, intermediary, project and sector are all managed lists: if an item exists it is selected directly, and if it is new it is added from the same field and becomes immediately available to other records without leaving the form. Linking to a grant is mandatory for every transfer.

3.5 Source & distribution model

We receive our funds from donors: sometimes the donor is our direct source, and sometimes a donor via an intermediary, with the actual transfer happening through the exchanges (LZM / MDR / CP). There is no separate "implementing partner" — the funding source is described by the donor, its type (direct / via intermediary), and the intermediary when applicable.

The grant's distribution across states happens when adding the allocation itself: lines (State + Sector + Project + Amount) are added as a single batch, and "Remaining to Allocate" updates automatically. "Disbursed" in a state allocation means the actual disbursement to the state.

4. Functional Scope (Phased)

Phase 1

1. A "Received Transfers" tab linked to the grant, with all Transfers-page fields, supporting splitting a request into tranches.
2. Three treasuries (LZM / MDR / CP) reflecting the balance at the exchange, with automatic posting on "Received" status.
3. A top KPI bar: In, Out and Balance per treasury, plus a grand-total card.
4. A "State Allocations" section below exchange tracking: Allocated/Disbursed/Remaining/Share per state, with State/Sector/Project/Donor dimensions and PDF export by scope.

Phase 2

1. The "Approvals" tab: add "select exchange" and "assign grant" so the Out side is debited from the treasury directly.
2. Show the KPIs at the top of the Approvals tab, and create/link the transfer record automatically on approval.

Phase 3

1. Back-dating to set the exchange and receipt date for historical transfers, and migrating Transfers data via the Payment ID.

5. Data Model

Relationships: the grant decision is the root. Each decision has received transfers (each may contain several tranches) and state allocations. Each tranche points to a treasury via the exchange field. The treasury aggregates In and is debited by Out.

Entity: ReceivedTransfer + Tranche

Field	Type	Description / Rule
payment_id	String	Payment ID — links the request to the receipt and the grant (migration basis).
grant_id (FK)	FK → Grant	Link to the grant (mandatory).
intermediary / donor	FK (list)	Intermediary and donor — managed, creatable lists.
date_sent	Date	Request date.
total_amount	Decimal	Total request amount = sum of tranches.
tranches[]	list	One or more tranches; each: amount + exchange + date received + status + receipt.
backdonor / distribution_id	String	Backdonor Grant ID and Distribution ID.
status	Enum	Pending / Received — "Received" posts the In amount.

Entity: Treasury (Exchange)

Field	Type	Description
name	Enum	LZM / MDR / CP (creatable).
total_in	Computed	Sum of Received tranches for this exchange (In).
total_out	Computed	Sum of transfer requests from the exchange (Out).
balance	Computed	Balance = In – Out.

Entity: StateAllocation

Field	Type	Description
allocation_id	PK	Allocation identifier.
state (FK)	FK (list)	State — 15, expandable.
sector (FK)	FK (list)	Sector per state: Multi-purpose / Capacity Building / Protection / Health / Education ...
project (FK)	FK (list)	Project — managed list.
donor (FK)	FK (list)	Donor (direct or via intermediary) — managed list.

Field	Type	Description
amount / executed	Decimal	Allocated and Disbursed (actual disbursement to the state); Remaining = Allocated – Disbursed.

6. State Allocations & Reporting

- Total allocation per state with Disbursed (actual disbursement), Remaining and Share (the state's share of the total).
- Group / filter by: State, Sector, Project, Donor, Intermediary.
- PDF download filtered by scope: State / Sector / Project / Donor / All — with the same columns, totals and percentages.

7. Business Rules

- "Received" posts the In amount to the exchange's treasury; a transfer request from the exchange posts the Out amount.
- Sum of a request's tranches = total request (saving is blocked on any difference).
- A receipt is mandatory when the status is "Received".
- Single currency (USD) in this phase; an audit log for every change, status update and back-date.

8. Acceptance Criteria

1. The Received Transfers tab works and is linked to the grant, and supports multiple tranches across different exchanges.
2. The three treasuries reflect In, Out and Balance, and update immediately on status change.
3. The grant summary shows the Decision (fixed), Received (computed) and Remaining to Receive.
4. The State Allocations section shows totals and percentages across dimensions, and exports PDF by the different scopes.
5. The lists (donor/grant/intermediary/project/sector/state) are selectable and creatable inline.

9. UI Mockups

The following are preliminary mockups for review and confirmation — figures are illustrative.

9.1 Main Page — Allocation Management

Mockup for review only — data and figures are illustrative, not actual. Purpose: confirm the page layout and logic before development.

Decision Amount

\$2,000,000

Fixed

Total Received

\$600,000

Computed

Remaining to Receive

\$1,400,000

✓ Updated logic: Decision amount is fixed = \$2,000,000 (a fixed grant reference). Meanwhile Total Received is computed automatically from the received transfers entered below (under the allocation) — not from the state allocations. Remaining to Receive = Decision – Received. ⚡ A change from the previous logic that computed the remainder from state allocations.

\$350,000

Treasury balance logic (at the exchange):

Treasury = actual cash balance held at the exchange (independent of the decision amount).

+ On status "Received" → the amount is credited (In) to the treasury matching Via.

– On "transfer request from the exchange" (Approvals tab: select exchange) → it is debited (Out).

= Balance = In – Out per exchange.

Migration & Linking:

The Payment ID is attached to every received amount

→ Linking the request to the receipt and the grant, and serving as the basis for back-dating historical receipts.

LCC — "Allocation Management" page mockup · v1 · for review and confirmation before development

The three treasuries + grant summary + Received Transfers tab + treasury ledger.

9.2 Add Allocation Screen — Distribute Grant Across States

Mockup — "Add Allocation" screen: distribute the grant across states as a single batch (multiple lines) in one step.

+ Add Allocation — Distribute Grant Across States

Linked to decision: LCC . P2H . 2026 - 06 - 21 . Emer

Decision Amount (fixed)
Previously Allocated
Remaining to Allocate

\$2,000,000
\$0
\$2,000,000

1 Funding Source

Source Type

Donor * Donor

Intermediary Intermediary — when "via intermediary"

Direct Donor
Donor via Intermediary

P2H

— None (direct donor)

Source model: We receive our funds from **donors** — sometimes the donor is our direct source, and sometimes a donor **via an intermediary**. The actual transfer happens through the **exchanges (LZM / MDR / CP)**. (There is no separate "implementing partner".)

2 Allocation Lines (State + Sector + Project + Amount)

Single batch · Creatable lists

#	State	Sector	Project	Allocated Amount	% of Decision	Note
1	North Kordofan	Multi-purpose	ERR Emergency	300,000	15%	Tranche 1
2	North Kordofan	Protection	Community Protection	300,000	15%	—
3	Choose a state... or add	South Kordofan	White Nile	+ Add new state Select state, then sector, project and amount...		

+ Add allocation line

Total Added Allocations
Remaining to Allocate After Save
% of Decision

600,000
1,400,000
30%

Within remaining to allocate

Distribution logic happens here: When adding an allocation, the grant is distributed across states directly (state/sector/project/amount), and "Remaining to Allocate" updates automatically. Sectors are tied to the state, and all lists (state/sector/project/donor) are creatable inline.

Save Allocations
Save & add more
Cancel

Fields marked with * are required

LCC — Add Allocation screen within the Allocation Management page - v1 - for review before development

Distributing the grant across states as a single batch (State + Sector + Project + Amount), with the funding source (direct donor / via intermediary) and remaining-to-allocate reconciliation.

9.3 Add Request Form (Received Transfer)

Mockup — the "Add Request / Received Transfer" form as it appears over the Allocation Management page. Fields and lists match the Transfers page.

Linked to the decision, with all Transfers-page fields and lists, plus validation prompts.

9.4 System Flexibility — Multiple Tranches & Creatable Lists

Mockup — demonstrates system flexibility: splitting a single request into tranches, and adding a new donor/grant inline.

✓ One request — multiple tranches with different amounts, exchanges and dates

✓ Donor/Grant: pick an existing one or add a new one instantly

+ Add Request — Received in Tranches

Linked to decision: LCC, P2H, 2026-06-21, Emer

Decision Amount (fixed)	Received so far	Remaining to Receive
\$2,000,000	\$600,000	\$1,400,000

1 Request Details

Payment ID * Payment ID

Date Sent * Date Sent

Total Request Amount * Total Amount
 USD

Grant / Decision * Grant

or + create a new grant/decision if not registered

2 Source (Intermediary & Donor)

Intermediary * Intermediary

Donor * Donor — open list

- Vitol
- DKH
- Safer World
- P2H Funds
- + Add new donor: "Mercy Hands"

Backdonor Grant ID Backdonor Grant ID

Distribution ID Distribution ID

Donor/Grant/intermediary are managed lists: if the name exists it is selected directly, and if it is new it is added from the same field (« + Add ...») and becomes immediately available to other records — without leaving the form.

3 Request Receipt — In Tranches

Single tranche Multiple tranches

#	Tranche Amount	Exchange	Date Received	Status	Receipt	Note
1	70,000	LZM	2025-02-13	Received	Attached	Tranche 1
2	32,000	MDR	2025-02-18	Received	Attached	Tranche 2

+ Add tranche

Total Request Amount	Sum of Tranches	Request Remainder
102,000	102,000	0

✓ Tranches match the total request

✓ Each tranche is posted **independently**: its amount is credited (in) to the treasury of its own exchange (LZM tranche → LZM treasury, MDR tranche → MDR treasury), so the same request can be split across more than one exchange. The sum of tranches must equal the total request (the system blocks saving if there is a difference).

Save Request & Tranches

Save + add another request

Cancel

Fields marked with * are required

LCC — Flexible request form (multiple tranches + creatable lists) - v1 - for review before development

Splitting a request into tranches across different exchanges + adding a new donor/grant inline.

9.5 State Allocations Section

Allocated/Disbursed/Remaining/Share per state across State/Sector/Project/Donor dimensions + PDF download.

10. Open Items (to clarify later)

- Grant distribution logic by need/criteria against a planned budget — to be studied within the future "Grant Management" development (out of scope for this request).
 - Timeline and scheduling estimates for each phase.
